BALL VALVE

J D Controls mfg. High performance Ball Valve as per international design and testing standard with total interchangeability, superior quality, workmanship & service. J D Controls mfg. Ball Valve in Single Piece / Two Piece / Three Piece Design to suit various critical, non-critical applications and pressure rating up to 800 class in both full bore & regular (reduce) bore design.

Ball valve, Two way, Screwed / Socket weld end, Full port

Standard of Compliance

- Design : BS EN ISO 17292 (BS 5351)/API 6D/ ASME B 16.34/BS EN ISO 12516
- Pressure Testing : API 598/API 6D/ BS EN 12266 I (BS 6755 Part I)
- Fire Testing : API 607/API 6FA/BS EN ISO 12266 Part II (BS 6755 Part II)
- Face To Face : ANSI B 16.10
- Flange Drilling : ANSI B16.5 Raised Face, Class 150/300
- Screwed End : ANSI B 1.20.1 (BSP/NPT)
- Socket Weld End : ANSI B 16.11
- Butt Weld End : ANSI B 16.25

ASME CLASS 150 & CLASS 300, FULL BORE

Size Range : 1/2" to 12" / DN 15 to DN 300

J D Automation series ball valve accepts an actuator or gear box can be bolted directly on the mounting pad (as per ISO 5211) of the valve body. No. extra brackets/couplers are required. The bottom of the actuator rests on the mounting pad of the valve. There are no external moving parts. The coupler/adaptor is less subjected to corrosion. An external bracket does not exist to create surfaces that may be untrue. This design alleviates a number of problems mentioned above.

FIRE SAFE DESIGN

The FIS21-22 Series Fire Safe valves are designed and tested as per the requirements of API 607 & BS EN ISO 12266-II Standard. The ball valves have soft seat rings. In the event of fire, a secondary metal seat located on the body comes in direct contact with the ball on burnout of the soft parts ensuring continued sealing. The anti static fire safe stem incorporates a machined fire lip, which will prevent leakage once the thrust seal is burned off.

ANTISTATIC DEVICE

When Static electric charge is generated due to high velocity and friction of fluid layers and concentrated on the valve, the spring loaded ball is coupled with installed on the stem which keeps continuity throughout the valve and discharges the static current

This eliminates the possibilities of fire hazard, especially while handling inflammable fluids

BLOW-OUT PROOF STEM

All JD Ball Valves have bottom entry stem design which features stem insertion from inside the body. An integral shoulder on the stem sits against the shoulder in the body, giving it blow-out proof integrity. In case of higher pressure line, functioning as the back seat for assured stem sealing. This design offers safety features superior to top-entry stem design where the line pressure works to break the stem seating.

FLOATING BALL

A floating ball design offers efficient sealing with simple construction. As the name indicates, the ball has some freedom to move along the axis of the pipeline, which offers efficient downstream sealing. When line pressure is applied to the closed ball, it moves slightly (or floats) downstream to maintain contact with the downstream seat where primary sealing occurs. A quarter turn motion from full open to full close ensures quick open-close action, an inherent advantage for automatic remote control application. Floating ball valve offers effective bidirectional sealing.

MIRROR FINISHED S.S. BALLS

All JD Ball Valves are available in Floating & Trunnion Mounted Design. The standard supply includes, Floating Ball design, where sealing takes place by allowing ball to move under pressure towards the down stream seat to achieve positive tight shut-off. JD stainless steel balls are manufactured to very close sphericity tolerances and are mirror finished.

JD Ball Valves are designed to meet the requirements of API 607 / BS EN 12266-II. Fires Safe Tests have been witnessed & certified by Bureau Veritas (I) Pvt. Ltd.

Automation Series

J D Multiport Ball Valves are ideal choices for many piping designs involving diverting or mixing. In certain applications a single valve can replace two, three, or four 2-way valves, reducing cost and saving space indirectly reducing stress on pipe line.

J D Controls offers a tremendous value in multi-port three and four way valves. Our Multiport Ball Valve selection covers Full Port & Regular (Reduce) Port, Flanged, Screwed, Socket Weld and Butt Weld (Welded Neck) End with Manual Hand Lever, Gear or Pneumatic Actuated in size range from 1/2" to 12" & Pressure Rating up to class 600.

3 Three Way Ball Valve (Four Seated) L / T Port Reduce/Full Bore, Flanged End

Three Way Ball Valve is available in "L" Port / "T" Port to meet the service condition. The Three Way "L" Port Ball Valve also called as a Mixing and Diverting Valve.

J D Multiport 3 Way Ball valves utilize four seats to support the ball, and to provide positive shutoff at any closed port. Multiple Gland Packing Seal & Spring Washer gives zero leakage from gland portion.

JACKETED BALL VALVE

J D Controls offers a range of Fully Jacketed Ball Valves. The jacket covers the body from one flange to the other flange. The body is modified by adding oversize flanges. As example: 2" x 3" Jacketed Ball Valve has the nominal bore of 2" (DN 50) and the flange size is 3"(DN 80). It allows enough space for bolting clearance.

The Jackets assure consistent valve Heating or Cooling of the process media to prevent crystallization (solidification) or seizing of flow media and maintains the temperature of media. This applies specially to media like bitumen and liquid sulfur. In addition, the efficient flow of media is ensured through the elimination of pockets.

J D Controls testing every jacketed valve again after the Jackets have been welded (Fabricated) to the body. Jacket Hydraulic & Air Test is carried out at 6.0 Kg. / Cm².

J D Forged Steel Valves have been proven in service application for over eight years. J D offers a wide range of Forged Steel Ball, Gate, Globe and Check Valves in reduced bore with Screwed, Socket Weld End & Butt Weld End Connection.

J D Forged Steel Valves available with wider choice of body and trim materials.

DOUBLE WINDOW TYPE SIGHT GLASS

Double Window Type Sight Glass design offers easy replacement of glasses without dismantling the whole Sight Glass assembly from process line.

Salient Features & Option:

Durable Construction * Large View Area * Wide View Area to Inspect the Fluid * Toughened Glass * Available in C.S./S.S. 304/316/304L/316L * Sizes Range from 25MM To 300MM * Pressure Rating PN 6 / PN 10 / PN 16 * Design & Testing As Per Mfg. Standard * End Connections as per ANSI B 16.5, Class 150* Fully Jacketed Double Window Type Sight Glass.

Tubular Full View Type Sight Glass

J D Sight Glass has been designed with outstanding quality and the feature you need to streamline your operations. Full view types Sight Glass are widely used for corrosive chemicals, acids and colored liquids. Sight Glass are generally used in processes, where spot required to detect presence of media, or to visual inspect color, clarity, turbidity, or other critical characteristics.

“Y” TYPE STRAINER

“Y” Type strainers are named after their shape and normally used for coarse filtration, but with large filtration area can be used with fine mesh also.

“Y” Strainer is used for the removal of foreign bodies in pipe line and allows line trouble free service and freedom from costly repairs or replacement for large area straining perforated screen lined with wire mesh can be used. The strainer improves the clearance in the medium, and prolongs the life of valves; protects expensive pumps, meters and other equipments. It is suitable for water, Air, Gas, petroleum, steam and other fluids.

“Y” Strainer has the advantage of being able to be installed in either a horizontal or vertical position. However, in both cases, the screening element must be on the downside of the strainer body so that entrapped solids particles can be properly collected.

Standard of Compliance

BUTTERFLY VALVES

RUBBER LINED, CENTER DISC, SLIM-SEAL DESIGN, |

WAFER - FLANGELESS, SANDWICH TYPE

J D High Performance Slim-Seal, Concentric disc design Butterfly Valves are reliable, maintenance free shutoff with permanently gas-tight seal with an integrally moulded or replaceable elastomer body liner. J D Butterfly Body having two nos. flange locating holes for sizes up to 12" (300mm) and from and above 04 nos. for easy alignment of valve during installation. Flange locating hole conform to as per ANSI B 16.5 Class 125 & Class 150 / BS 10 Table D, E, F / PN 6, PN 10, PN 16 or other international standard.

This butterfly valves excess other conventional valves such as gate valve and globe valves in all aspects, especially in terms of light weight, less number of component, no flange gaskets required and economical operation and maintenance costs

Standard of Compliance

Valve Design : BS 5155 / API 609
 Pressure Testing : BS 6755 Part I / API 598
 Face To Face : ANSI B 16.10
 End Connection : Wafer Type, Flangeless, Sandwich Type
 Flange Drilling : ANSI B 16.5 / BS 10 Table / DIN / IS Std.
 Pressure Rating : PN 10 / PN 16

Special Options:

P.T.F.E. (PFA/FEP) Lined Butterfly Valve
 Gear / Pneumatic Rotary Actuator Operated
 Moulded / Replaceable Seat option
 Damper Type Butterfly Valve for High Temperature Air Service

Material of Construction:

Parts Name	Materials
Body	ASTM A 126 GR. B / Ductile Iron/ ASTM A 216 GR. WCB/ ASTM A 351 GR. CF 8 / CF 8M / CF 3 / CF 3M
Disc	ASTM A 126 GR. B / Ductile Iron/ With Nylon Coating/ ASTM A 216 GR. WCB/ ASTM A 351 GR. CF 8 / CF 8M / CF 3 / CF 3M Aluminium Bronze
Body Seat (Liner)	Nitrile / EPDM / Neoprene / NBR / Silicon / Viton / Hypalon / PTFE
Gland Seal	Nitrile / EPDM / Neoprene / NBR / Silicon / Viton / Hypalon
Stem	AISI 410 / 304 / 316 / 304L / 316L
Hand Lever	C.S. / S.S.
Fasteners	C.S. / S.S. 304/ 316

Salient Feature:

Concentric, Slim-Seal Design
 Soft Seat Design, Zero Leakage
 Less Weight, Easy To Install
 Lower Torque with any fluid
 Permanently tight closure
 Bi-Directional Valve
 Smooth, Easy Operation
 Long Service Life
 Maintenance Free Version
 Suitable for On-Off as well Throtting Service
 Wafer Design Body

FLUSH BOTTOM VALVE

Flanged End, Rating-150#

JD Flush bottom valves (Tank valves) are designed to provide drainage and dead space free shutoff for reactors, vessels and storage tanks. The dead space free shutoff is accomplished by placing the valve seat flush with the bottom of the vessel. This eliminates any buildup of product within the vessel nozzle itself.

Flush Bottom Tank Valve (Y Type)

Feature:

- ~ Stronger Heavy Duty Construction
- ~ Flexible design Capabilities allow fitting any vessel nozzle configuration
- ~ Deep stuffing box is providing to assure tightness and maximum packing life
- ~ Precision Stem Packing Chamber
- ~ Self Aligning Two Piece Gland
- ~ Ground Finish Stem
- ~ Steam or Cooling Jacketed Valve
